

DEK DRAIN has solved a serious problem for us. Hatteras Island is the Hurricane Capital of the World. Located 30 miles out in the Atlantic Ocean our weather can be quite severe. Most of our cottages here have stacked decks and when it rains (*which is often!*) guests cannot use the outdoor decks. Now that *DEK Drain* has been installed, mold and mildew are a thing of the past and the decks can be enjoyed in any weather. Our installations have been through four hurricanes and six tropical storms, without damage! If *DEK Drain* can survive here, it can perform anywhere!""
